

IN THE CLAIMS

Listing of Claims:

Claim 1 (currently amended): A method on a client server network for the ordering, downloading, and installation of software, the method at the client system comprising ~~the steps of~~:

- presenting to a user a list of software for installation on a client system;
- receiving a user selection for ordering at least one software file from the list of software on a software ordering server;
- receiving a response to the order for at least one software file from the software ordering server, the response includes an entitlement ID for authorizing the installation of the software file, wherein the entitlement ID is sent from the software ordering server to the client system and the software delivery server;
- requesting a download copy of the at least one software file from the software delivery server, the request includes the entitlement ID previously received from the software ordering server;
- receiving, in response to the entitlement ID received from the software ordering server matching the entitlement ID received with a request for the download copy, the copy of the at least one software file from a staging server as part of a payload containing at least one customized installation script; and
- installing the received copy of the at least one software file.

Claim 2 (currently amended): The method according to claim 1, wherein the step of receiving a response to the request for a copy of at least one software file, further comprising ~~the sub-steps~~:

- receiving a request for acceptance of a software license agreement for the copy of the at least one software file from the software delivery server; and
- sending the acceptance of the software license agreement to the software delivery server for the requested copy of the at least one software file.

Claim 3 (currently amended): The method according to claim 1, wherein the ~~step~~ of receiving a response to the request for a copy of the at least one software file, further comprising ~~the sub-steps~~:

- sending a system platform type for the client system;
- sending an amount of available storage for the client system; and
- sending at least one identifier of other software installed on the client

system.

Claim 4 (previously presented): The method according to claim 1, wherein the ordering of at least one software file from the software ordering server is accomplished only when the software file is needed for use.

Claim 5 (currently amended): The method according to claim 1, wherein the ~~step~~ of installing the received copy of the at least one software file requires no further intervention from the software ordering server.

Claim 6 (currently amended): The method according to claim 1, wherein the ~~step~~ of installing the received copy of the at least one software file requires no client user intervention by a user on the client system.

Claim 7 (currently amended): The method according to claim 1, wherein the ~~step~~ of installing the at least one received copy of the software file does not allow any choices or options by a user on the client system.

Claim 8 (currently amended): The method according to claim 1, wherein the ~~completed step of~~ completing the installing installation of the at least one received software file obviates the need for help to install, or questions about the installation of the at least one software file from a help desk.

Claim 9 (currently amended): A method on a client server network for the selection, download and installation of software, the method at the software delivery server comprising ~~the steps of~~:

receiving from a software ordering server, an entitlement ID for authorizing the installation of at least one software file which has been previously ordered on a client system, wherein the software ordering server originates the entitlement ID;

receiving a request from the client system for the download of a copy of the at least one software file to the client system, wherein the request includes an entitlement ID used to order the software file;

verifying both the client system's PC compatibility for the requested copy of at least one software file and that the entitlement ID received from the ordering server matches the entitlement ID used to order the at least one software file; and

scheduling the download of the requested software from a staging server to the client system.

Claim 10 (currently amended): The method according to claim 9, wherein the ~~step of verifying~~, further comprising ~~the sub-steps~~:

requesting the client system's PC platform type;

requesting the client's system's PC platform's available storage;

requesting the client system's platform's installed software; and

verifying that one or more responses to the requests above are within allowable limits.

Claim 11 (currently amended): A method on a client server network for the ordering, deployment and installation of software, the method at the software delivery server comprising ~~the steps of:~~

receiving an order entitlement ID for at least one software file, which has been previously ordered from a client system on a software ordering server, wherein the software ordering system originates the entitlement ID;

storing the entitlement ID for at least one software file in a database;

receiving a request for the down-load of at least one requested software file with a download entitlement ID from a client system;

determining if the download entitlement ID matches the order entitlement ID previously stored in the database, and in response to the order entitlement ID matching the download entitlement ID, scheduling a response to the request for a copy of the at least one software file at a scheduling server.

Claim 12 (currently amended): A computer readable medium containing programming instructions for the ordering, downloading, and installation of software over a client server network, the programming instructions executing at the client system comprising:

- presenting to a user a list of software for installation on a client system;
- receiving a user selection for ordering at least one software file from the list of software on a software ordering server;
- receiving a response to the order for at least one software file from the software ordering server, the response includes an entitlement ID for authorizing the installation of the software file, wherein the entitlement ID is sent from the software ordering server to the client system and the software delivery server;
- requesting a download copy of the at least one software file from the software delivery server, the request includes the entitlement ID previously received from the software ordering server;
- receiving, in response to the entitlement ID received from the software ordering server matching the entitlement ID received with a request for the download copy, the copy of the at least one software file from a staging server as part of a payload containing at least one customized installation script; and
- installing the received copy of the at least one software file.

Claim 13 (previously presented): The computer readable medium according to claim 12, wherein the programming instruction of receiving a response to the request for a copy of at least one software file, further comprising the programming instructions of:

- receiving a request for acceptance of a software license agreement for the copy of the at least one software file from the software delivery server; and
- sending the acceptance of the software license agreement to the software delivery server for the requested copy of the at least one software file.

Claim 14 (original): The computer readable medium according to claim 12, wherein the programming instruction of receiving a response to the request for a copy of the at least one software file, further comprises ~~the sub-steps of:~~

- sending a system platform type for the client system;
- sending an amount of available storage for the client system; and
- sending at least one identifier of other software installed on the client

system.

Claim 15 (previously presented): A computer readable medium containing programming instructions for the ordering, deployment and installation of software over a client server network, the programming instructions executing at the software delivery server comprising:

receiving an entitlement ID for at least one software file, which has been previously ordered from a client system on a software ordering server, wherein the software ordering server originates the entitlement ID;

storing the entitlement ID for at least one software file in a database;

receiving a request for the down-load of at least one requested software file with a download entitlement ID from a client system; and

determining if the download entitlement ID matches the order entitlement ID previously stored in the database, and in response to the order entitlement ID matching the download entitlement ID, scheduling a response to the request for a copy of the at least one software file at a scheduling server.

Claim 16 (cancelled)

Claim 17 (currently amended): A software delivery server coupled to a client server network, the delivery server comprising:

a network interface for coupling at least one client system;

an order entitlement ID received over the network interface for at least one software file, which has been previously ordered by the at least one client system on a software ordering server, wherein the software ordering server originates the entitlement ID;

a database used to store the entitlement ID for at least one software file;

a download request received over the network interface from at least one of the one or more client systems for a copy of the at least one software file, wherein the request includes an order entitlement ID for at least one software file;

and

means for determining if the entitlement ID received from the client system matches the order entitlement ID previously stored in the database, and in response to the order entitlement ID received from the client system matching the previously stored entitlement ID, scheduling a response to the request for a copy of the at least one software file at a scheduling server.
